

## **SKyPRO Introduces First Voice Over IP Calling Solution Integrated With Novell® GroupWise®**

SKyCOM Unified Communications Application Adds VoIP Capability for Improved Productivity, Increased Convenience, and Lower Communications Costs.

January 26, 2009, Las Vegas. – SKyPRO™ AG announces the SKyCOM™ Unified Communications application that integrates with Novell GroupWise to provide Voice over IP services for voice and messaging communications. SKyCOM delivers improved user productivity and convenience, while lowering communications costs for companies.

SKyCOM increases user productivity by using the PC as the single interface for all communications. GroupWise integration enables the user to track all communications and use GroupWise as a simple CRM tool. SKyCOM also allows easy setup of conference calls with up to 7 participants, and will record any call as a .wav file for later playback. The .wav file can also be shared with co-workers, improving information flow within the company.

SKyPRO will work with existing VoIP server hardware from vendors such as Cisco® or equally well with the Asterisk® Open Source telephony server. Using the Asterisk telephony server in combination with SKyCOM, a company can avoid large investments for an upgrade to an IP-PBX or expensive IP Phones.

"In today's challenging economic climate, companies all over the world need to cut costs and improve user productivity to stay competitive. SKyCOM enables all GroupWise users to achieve these goals without causing disruptions," said Horst Fuhrmann, President of SKyPRO.

"Companies can no longer survive on the market without services such as email or VoIP, like the SKyPRO client, that have established themselves as the new methods of communications," said Frank Martin, CFO of GlobeTac, based in Zug, Switzerland. Frank also said, "In addition to using SKyCOM internally, we will be proposing this product to our consulting clients, who include multinational companies and organizations with hundreds of locations all over the world."

According to John Lincoln, Director of IT at almabani General Contractors, Jeddah, Saudi Arabia, "SKyCOM complements the existing GroupWise platform ideally. SKyCOM extends GroupWise to provide

VoIP phone calls directly from your Mailbox. SKyCOM can make phone calls from your PC with up to 7 participants and the access to your existing GroupWise contact data as well as an abundance of additional features that enhances user productivity. SKyCOM will definitely improve our communications between our head office and job sites all over the Middle East."

Pricing starts at \$95.

SKyCOM is available in English and German versions. Other language versions will be available according to marketplace demand.

SKyCOM is available immediately in the United States, Canada and all countries in Europe.
